

HERBAL-ORIGIN TESTOSTERONE-LOWERING AND CALMING PREMIX FOR FATTENING CATTLE

INTENDED USE: BULLKES contains phytoestrogens and calming essential oils. The strong phytoestrogens that are used, affects directly or indirectly GnRH and GnIH oscillation, and causes decrease in FSH, LH and testosterone level. It increases serum estrogen and prolactin level.

By decreasing the central nervous system's activity, thanks to the phytoestrogens and calming essential oils in the content of BULLKES, lowers awareness in the brain and decreases the jumping activity of fattening animals.

With the use of BULLKES, the jumping activity of animals with decreasing testosterone level decreases, also by preventing from the increase in energy need, it provides increase in weight gain. It also prevents from animal injury, death, disturbing other animals in paddock, etc.caused by jumping activity.

USAGE.

It is used by being mixed to the daily feed of animals(per animal).

Cattle: 50-100g

COMPOSITION:

Macro Minerals / Nutritional additives

11.4.2 Sodium Bicarbonate (NaHCO₃) 2,48 %

11.2.1 Magnesium Oxide (MgO) 2,05 %

11.4.1 Sodium Chloride (NaCl) 2,4 %

Zootechnical additives

Phytoestrogens 27,6 %

Carriers

Wheat Middlings

Alfalfa flour

Bypass Fat
