## SPECIAL PREMIX INCREASING MILK FAT FOR DAIRY ANIMALS

**INTENDED USE:** Buffer fat; for dairy cows, helps in increasing the milk fat of animals whose milk fat is decreasing depending on heat stress. It provides increase in the population of live organisms. It maintains Rumen pH at optimum level. It contributes to increase of milk quantity. Thanks to yeast and rumen regulators in its content, it regulates rumen and intestinal microflora. It prevents from laminitis (lameness) caused by the rumen acidosis. By this means, it enhances utilization of the feed. By binding toxins, it protects animals against toxin poisoning.

**USAGE:** It is used by being mixed to the daily feed of animals (per animal).

Dairy Cattle; 100-300 g
