## ORGANIC ACID PREMIX FOR POULTRY AND RUMINANTS

### INTENDED USE :

It is used to suppress harmful pathogens that are effective in the development of poultry and in the digestive system, to reduce their effect levels and to limit their populations. It is beneficial when used regularly in animals with coccidiosis. By increasing the efficiency of feed, it provides an increase in meat yield.

It is used for a healthy rumen development in ruminants and to stabilize the microorganism activities in the rumen environment. By increasing the efficiency of feed, it provides an increase in milk and meat yield.

### USAGE :

It is used by being mixed 1 – 2 L into 1.000 L of drinking water for poultry and 0,5– 1 L into 1.000 L of drinking water for ruminants.

| Active Ingredients   | The Name of Additive | Quantity in Premix | Units |
|--|----------------------|--------------------|-------|
| <b>Organic Acids / Preservatives / Technological Additives</b> |                      |                    |       |
| Propionic Acid   | Propionic Acid       | 200                | ml/L  |
| Malic Acid   | Malic Acid           | 50                 | ml/L  |
| Citric Acid  | Citric Acid          | 5                  | ml/L  |
| Formic Acid  | Formic Acid          | 50                 | ml/L  |
| Lactic Acid  | Lactic Acid          | 80                 | ml/L  |
| <b>Carriers</b>  |                      |                    |       |
| Acetic Acid  | Acetic Acid          | qsp                |       |
