# MAKROVIT-C

## VITAMIN SUPPLEMENT FOR POULTRY

### INTENDED USE :

Although poultry can synthesize vitamin C in their kidneys, vitamin C synthesis may be insufficient in stress conditions in getting high performance and in cage-type integrated production areas. Vitamin C supplements are required to solve problems such as optimum growth, the egg production increase and fertility. Vitamin C is one of the vitamins necessary for the calcification and smoothness of the egg shell. Makrovit C will provide an important support in solving these problems.

### USAGE :

It is used by being mixed 1 gm into 10 liters of drinking water.

Active Ingredients	Name Of The Additive	Quantity In Premix	Units
<b>Vitamins / Nutritional Additives</b>			
Vitamin C	Ascorbic acid	90	%
<b>Carriers</b>
